PVC SHUTTER PROFILE

PROFILE PRODUCTION

As an enterprise that started from the production of PVC shutter profiles, **Taiwan Bamboo Curtain Co., Ltd.** has 10 years of rich experience in profile production to ensure product quality and stability. Unique PVC formula, through granulation, foaming, extrusion, molding, cooling and other processes, to ensure the texture of the profile; Precise control of the meter weight data, bring our profiles sufficient hardness and toughness; The use of water-based paint ensures sufficient environmental protection of the product; The use of chromatograph in quality inspection also ensures the unity of product color.

STRICT QUALITY CONTROL PROCESS

In addition to the quality inspection of the paint color through the chromatograph after painting, in the quality inspection, our profiles should also pass a number of quality inspection processes such as light detection, anti-scratch detection, anti-torsion detection, surface flatness detection, etc., to eliminate all quality problems.

LONG-TERM QUALITY ASSURANCE

The application of the exclusive formula brings more long-term quality assurance, reduces the use of calcium powder, and adds titanium dioxide, which can better prevent the color change problem under long-term exposure to the sun, and the color change time is as long as 50,000 hours. The use of organic ene stabilizer can not only guarantee the environmental protection performance of the product, but also bring the product better foaming effect.

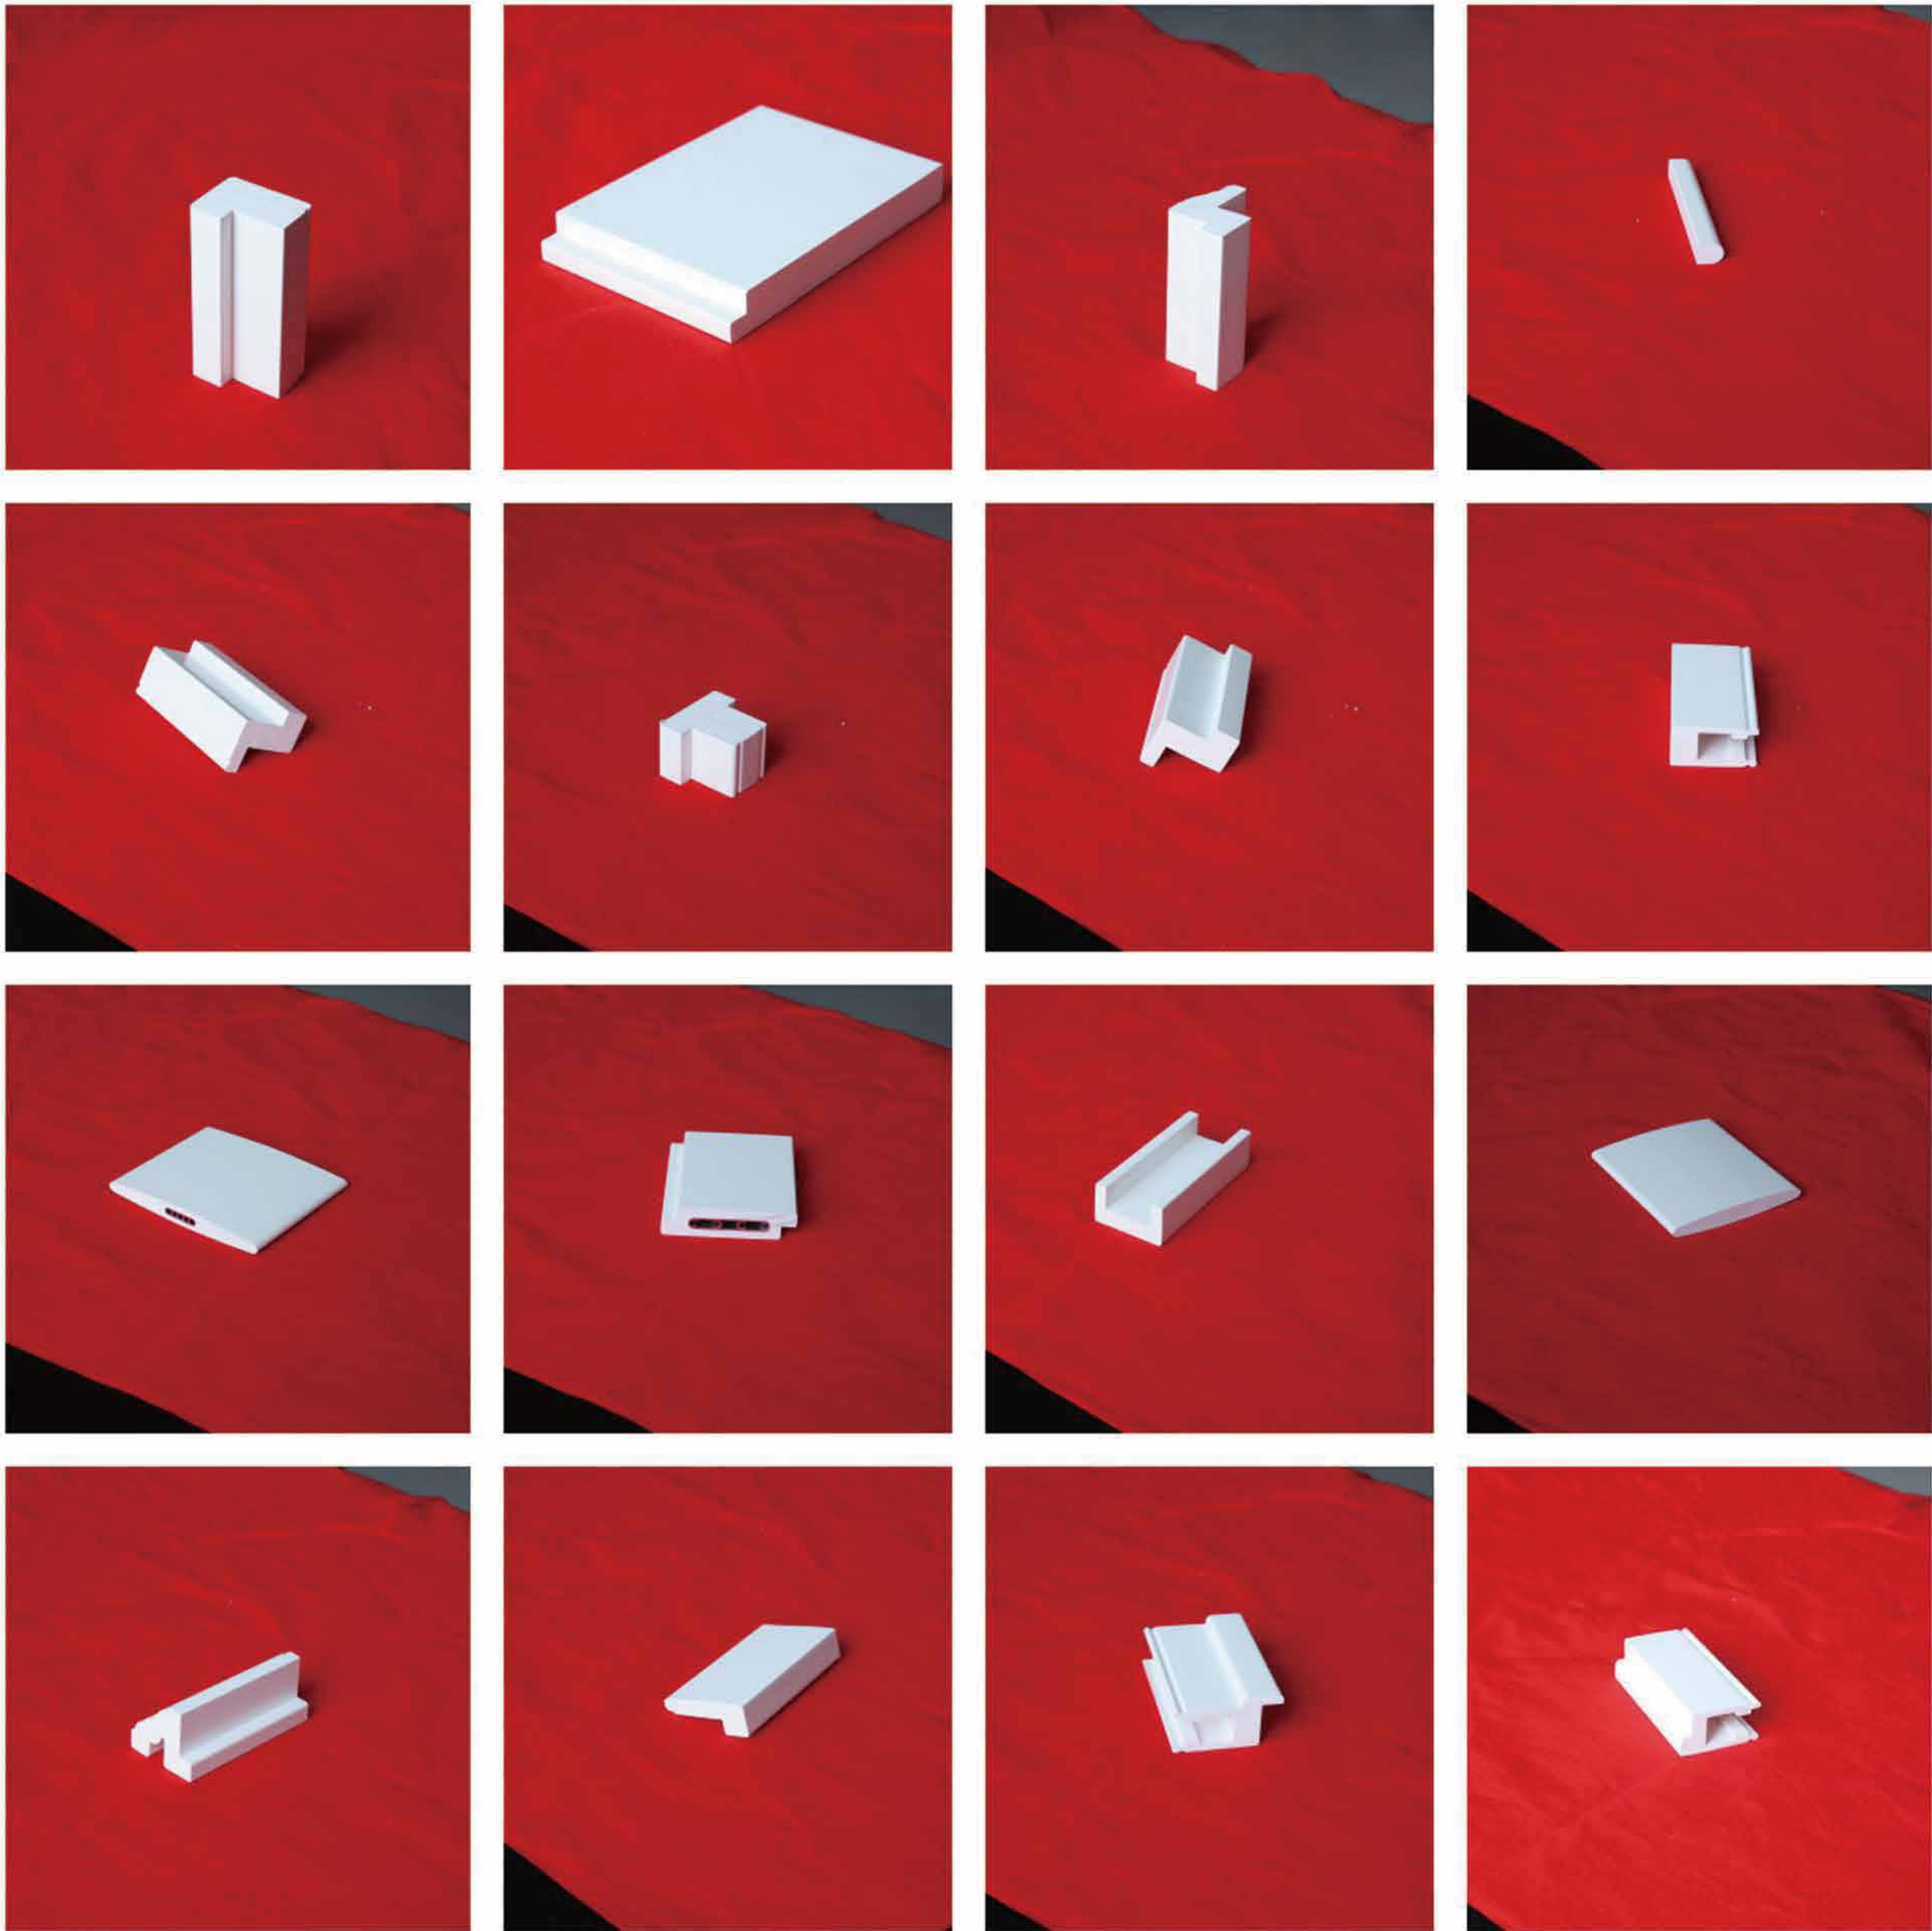

CUSTOMIZABLE

We are the manufacturer, and our profiles can be produced in full accordance with customer requirements under the condition of MOQ, whether it is size, formula or color, can be customized.

SHUTTER STYLES

PVC Shutters

Compared with other materials, PVC material has a lower price, but its material performance is very good, as a plastic, PVC material has a relatively light weight, excellent waterproof performance, strong and stable characteristics, suitable for bathroom, kitchen and other wet areas.

Aluminium Alloy Shutters

The ductility and robustness are better than other materials, and it is also the most wind resistant of all materials, but the weight is larger and the price is high; The color selection is also the most flexible, and the installation difficulty is higher than that of PVC shutters. Suitable for outdoor areas.

Paulownia Shutters

Wood shutters are the most traditional shutter material, paulownia shutters are more cost-effective, lighter weight, can make a variety of shapes.

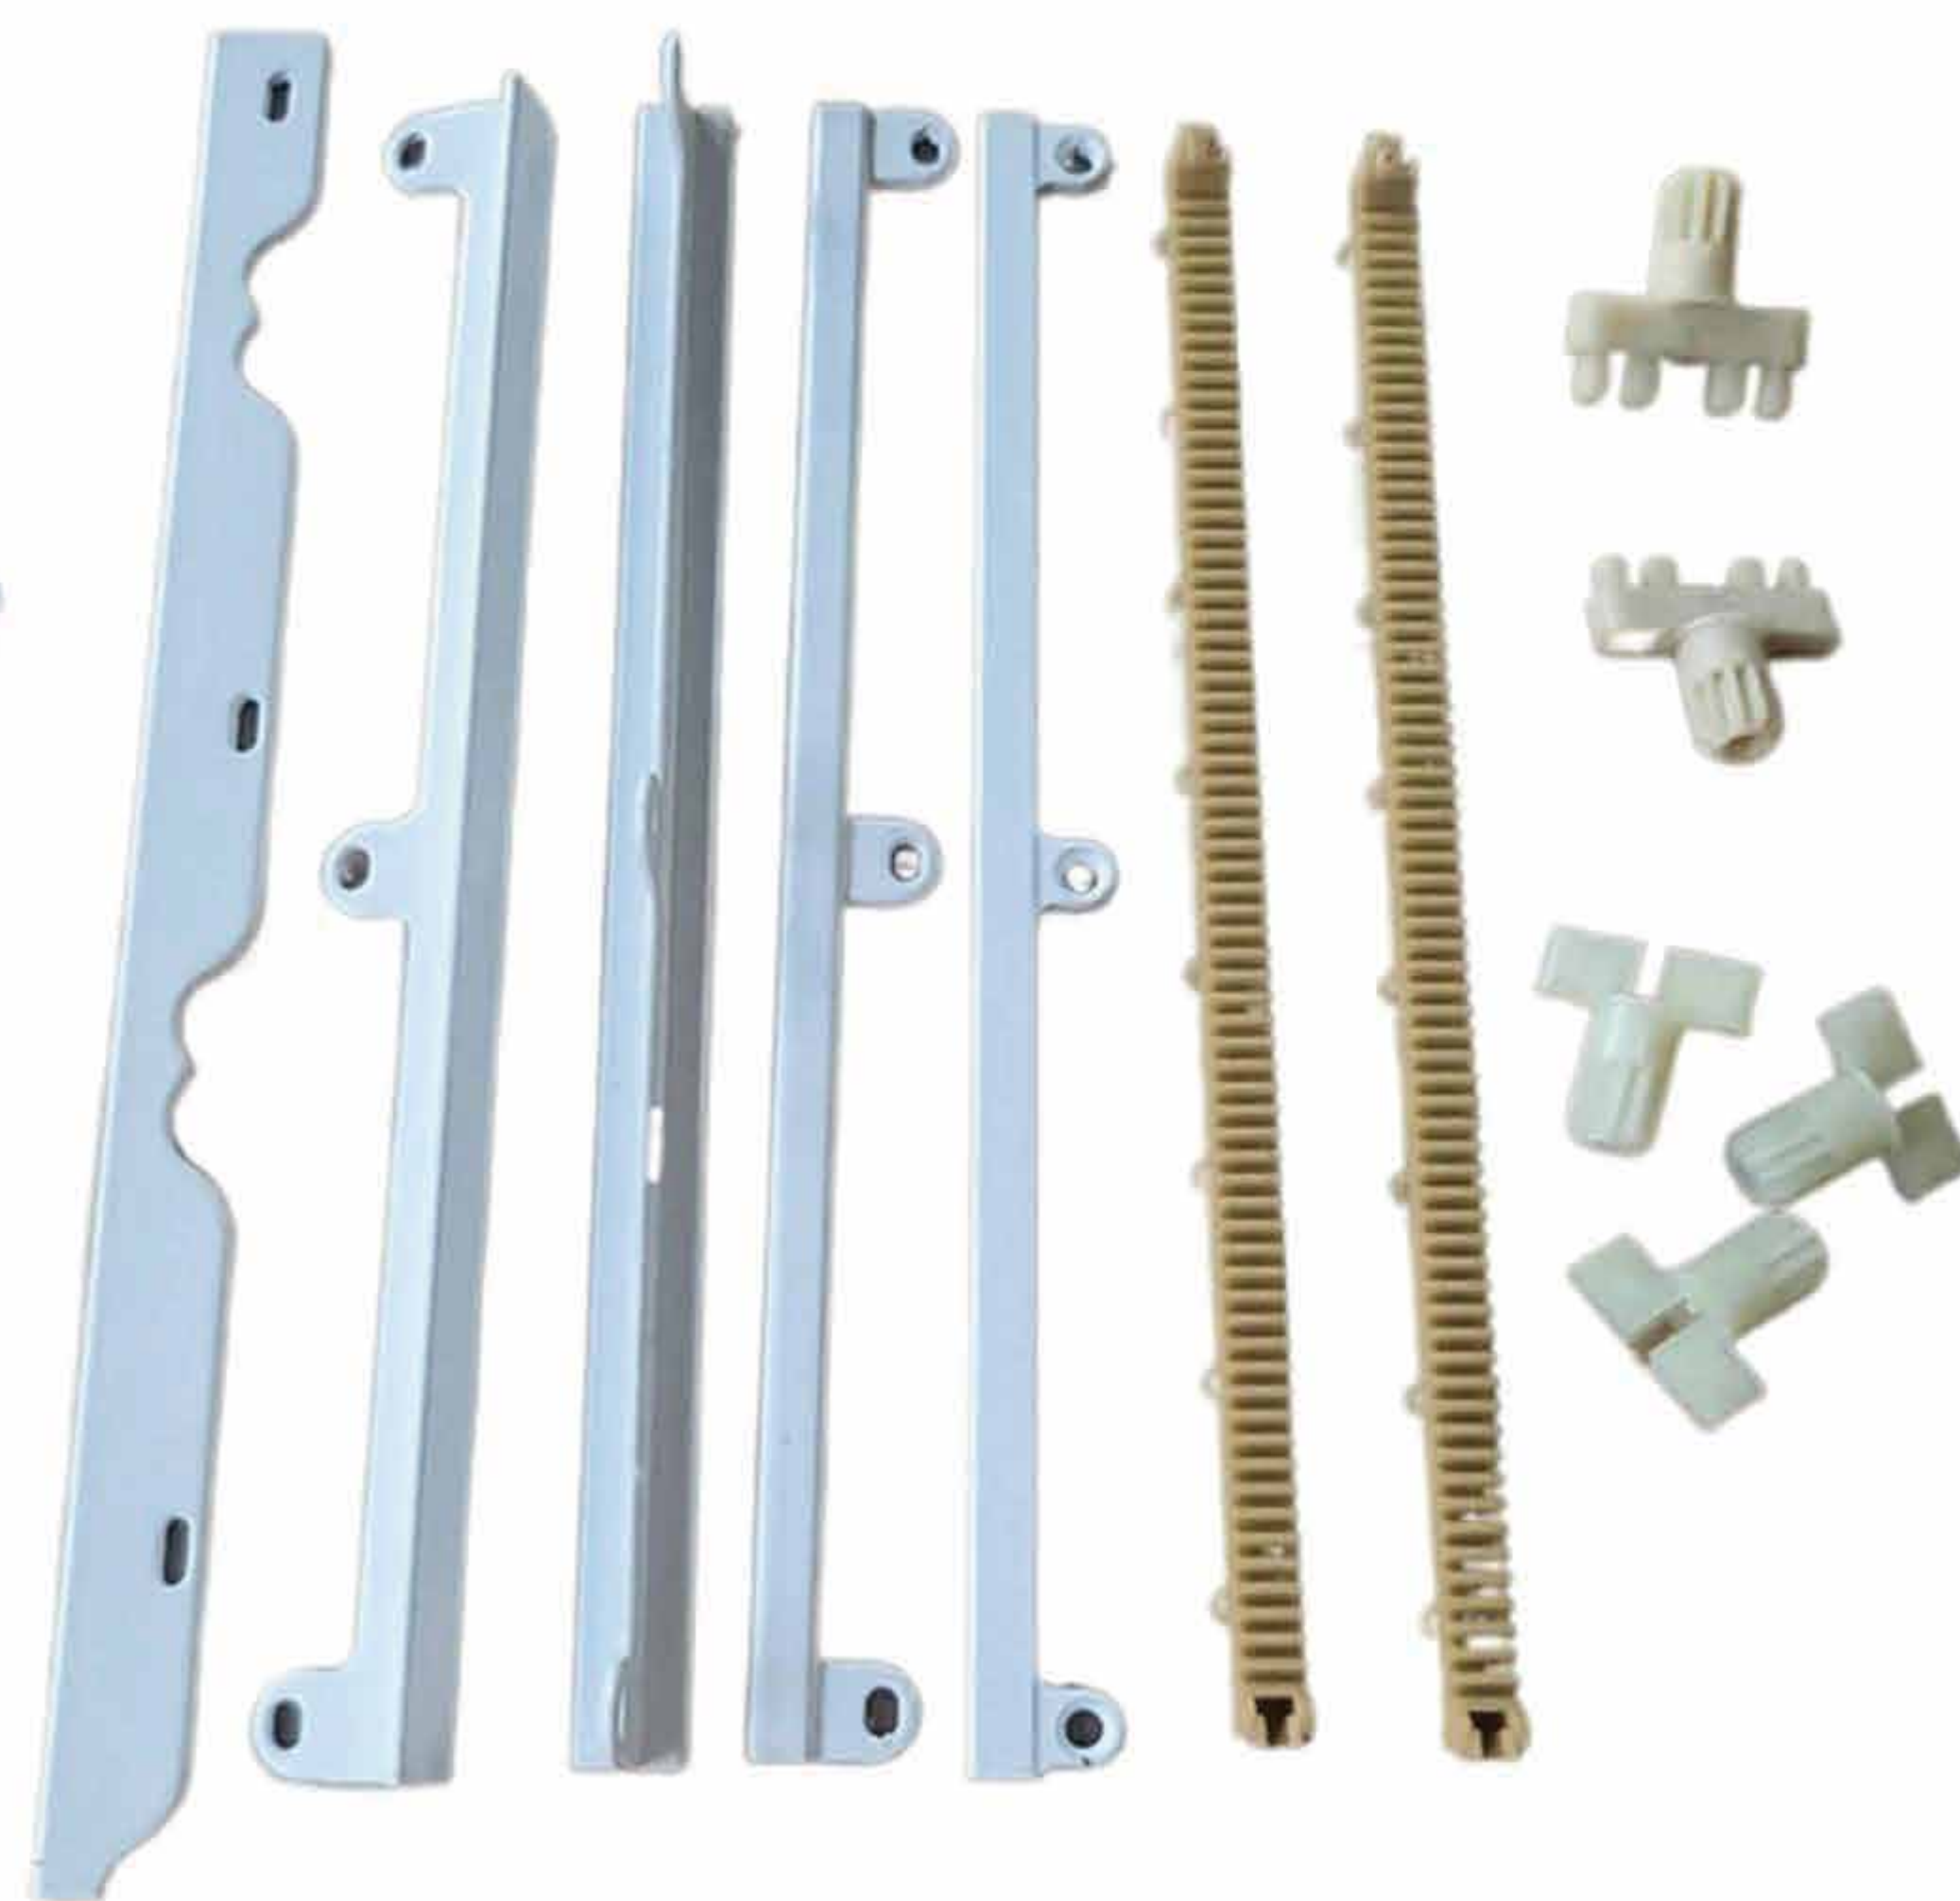

Basswood Shutters

Basswood belongs to the high-end wood in the shutters, basswood has excellent performance, beautiful pattern, hard texture, and reasonable weight, which can give users sufficient luxury experience.

INTELLIGENT SHUTTER SYSTEM

- The shutters installed with the intelligent system can be fully opened and fully closed with one button, and the opening and closing angles can be accurately controlled according to the user's wishes, so that the shutter control is more labor-saving.
- One remote control can control the whole house, through channel adjustment, only one remote control can control the opening and closing of the whole house shutters, and even control the different opening and closing angles of each shutter.
- In addition to the intelligent system can be controlled by its own remote control, it can also be connected to the home intelligent system through the wifi connection. At the same time, the open source protocol can access most smart home apps on the market, so that a mobile phone can control the whole house.
- It can realize full intelligent control, opening and closing according to the temperature, light, humidity, time and other data detected by indoor sensors, to ensure the comfort of the indoor environment.
- Solar charging, as long as there is sun irradiation will not power off.

No rope rolling curtain, simple and beautiful, is an upgrade of the traditional rope rolling curtain function, adjust the lifting through direct contact with the hand, lift and stop at hand; No rope, protect children's safety curtain (to prevent children from choking safety risks)

The intelligent curtain system can be controlled by remote control, mobile phone, voice, smart home system and other multiple ways, and can also be connected to the indoor environmental monitoring system, intelligent control of the opening and closing of the curtain, the lifting of the curtain, so as to achieve the intelligent integration of the whole house.

The mute effect is full, the use of high quality bead head, strict quality control to ensure the assembly process of each product, so that the home light regulation silent
